

INVENTORY MANAGEMENT FOR PLASTICS

AccuBin

AccuBin™ is a comprehensive, cloud-based, inventory management system that allows you to remotely monitor inventory through a user-friendly dashboard. This software provides a secure platform to view both real-time and historical trends in your inventory data. AccuBin™ is designed to eliminate the stress and guess work out of bulk solid inventory management.

AccuBin Sensors are Bolt-On Strain Gauges that attach to a Silo's Steel Skirt or Legs. These Sensors along with Special Cloud Based Algorithms achieve Inventory Accuracies of 2-5% of the Weight of Silos Contents. Wireless Communications eliminate the need to Hard Wire the Data back to a Host Computer.
